FRAME TECHNOLOGY - TR90:

We use Switzerland EMS ultra-light technology memory plastic GRILAMID TR90 which has strong elasticity and collision resistance, super durable polymer. Our TR90 sunglasses can offer super lightweight, flexible and comfort for long-time wearing.

POLARIZED LENSES/LENS TECHNOLOGY:

The sun's rays reflect light in every direction, so when a ray hits a flat surface, the reflected light shines back at your eye and is magnified, causing glare. It reduces your depth perception, distorts your view and color perception.

ADVANTAGES:

1: Reduce Glare - On a sunny day, you may notice that objects in the distance appear hazy, or nearby vehicles are reflecting light in a way that is nearly blinding. A polarized lens removes the effects of glare by blocking reflections. This improves eye comfort and allows you to take in the view without squinting.

2: Water Sports - Without polarized lenses, the water's surface simply reflects everything around it. This obscures view into the water almost completely. Polarized lenses block this reflection and enable the wearer to see the contents of the water instead of the sky.

3: Reduce Eyestrain - Another nasty side effective of glare, eyestrain can be relieved with polarized lens wear.

4: Better Vision - Wearing polarized lenses can reveal colors and images like never before. You will see crisply and cleanly, with a level of detail that may astound you.

LENSE TECHNOLOGY

Uv400 • Antifog • Oleophobic • Hydrophobic • Revo Coating • Shatter Proof • Photochromic • Polarization
